

Are you at the leading edge of change
in your community and school?

Where others see problems, do you
see opportunities?

Do you gravitate toward collective
action when faced with challenges?

LEADING CHANGE SEMINAR SERIES

Deepen your knowledge, skills and habits of mind to Educate for Sustainability and acquire the additional tools you need to support your approach to catalytic leadership.

When problems arise, applying a new way of thinking is necessary! Leading Change is designed to strengthen the leadership qualities you already possess—and need most—to stay the course toward sustainability.

In each session of the Leading Change Series, we'll draw on the real-life leadership challenges you face in your own communities and schools through various topics. We'll work together to strengthen your skills of catalytic leadership and delve into the complex processes of change management. You'll learn to anticipate and mediate challenges better, build them right into your process, and handle them creatively and effectively when they arise.

Participate in four or more sessions and meet corresponding certification requirements (5-8 hours of outside assignments), and receive an Advanced NJ Learns Education for Sustainability Certificate upon completion.
